

Figure 1 compares U.S. oil production and the U.S. price of gasoline from 1990-2011. The red line is domestic production, which has increased in the last three years. The blue line is the U.S. gasoline prices.

Figure 2 compares U.S. dependence on foreign oil during 2005-2011. In 2010, the U.S. imported less than 50 percent of the oil our nation consumed, the first time that has happened in 13 years, and the trend continued into 2011.

Total Crude Oil Production on Federally-Owned Land (Onshore and Offshore) 2006-2011

Source: U.S. Energy Information
Administration

Figure 3 shows the total crude oil production on federally-owned land (onshore and offshore) from 2006-2011. The red lines represent the number of barrels produced during the last three years of the Bush Administration, and the blue lines represent the number of barrels produced during the first three years of the Obama Administration.

Total Federally-Owned Acres Leased for Oil and Gas Development (Offshore and Onshore) 2011

Source: BOEM and BLM

Figure 4 shows the total federally-owned (onshore and offshore) acres leased by industry for oil and gas development in 2011. The blue portion represents the number of acres in production, and the red portion shows the number of acres that are under lease but not in production.

Figure 5 shows federally-owned acres offered to the industry for lease versus the number of acres purchased by the industry in 2009 and 2010. The blue lines are the number of acres offered for lease but not purchased, and the red lines are the number of acres that the industry actually leased.
